Building Automation

One control platform for all automation tasks

New thinking brings about new technological demands: whereas multimedia applications, building automation and entertainment concepts were previously implemented separately, all disciplines must now interconnect intelligently. This stems from the complexity of the applications and the comfort standards now demanded in buildings of all kinds. As a platform for centralised control, PC-based control from Beckhoff provides the answer. From audio and video control to control of show effects and device management, as well as newer concepts such as condition monitoring – all

Beckhoff implements open automation systems based on PC control technology.

disciplines are directly linked with the integrated building automation system. The benefits become immediately clear: all system information is available to the user on one platform due to the inherent continuity and flexibility provided by PC-based control. Operation is simplified, comfort levels are increased and costs can be reduced.

The modular automation concepts from Beckhoff are based on a broad range of powerful Industrial PCs, I/O components for a large variety of signals, the high-speed EtherCAT communication system, universal TwinCAT automation software, along with highly dynamic drive technology components. Control solutions that span

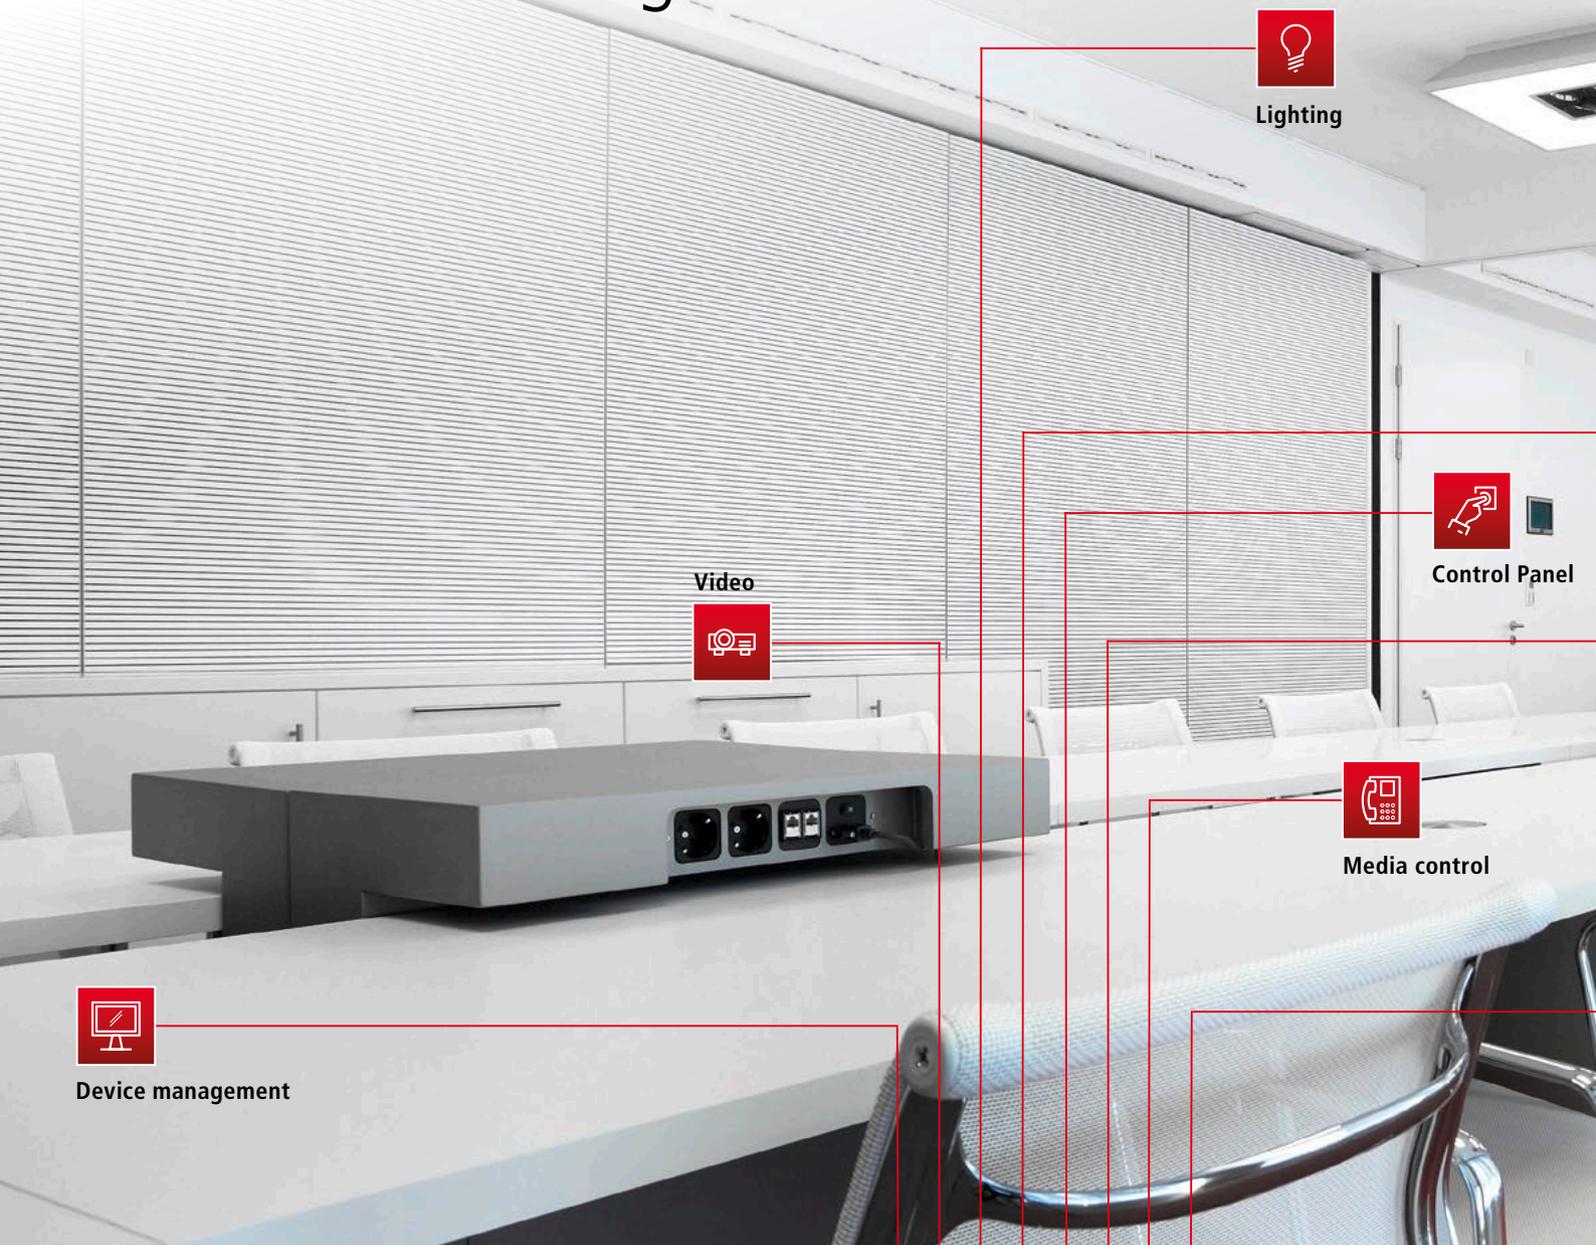

numerous application areas – from industrial and machine automation to wind farm networking through to building automation and media control – can be implemented effectively and economically. References from all around the world validate the reliability of the control components and the expertise of Beckhoff in countless industries and applications.

Performance level scalability, modularity, reliability and long-term availability of components make PC-based automation technology from Beckhoff the ideal toolbox to implement leading-edge media technology applications.

Your benefits with PC-based control:

- Economic efficiency – from investment, to implementation, to use
- Future-proof – with technologies available today for the demands of tomorrow
- Simple networking – all information is available in one universal system
- Flexibility – to respond and adapt to individual user needs
- High availability – through broad compliance with accepted communications standards

One central platform for both: Media and building automation.

HVAC

Media technology and building automation integrated into one control platform

At the heart of the Beckhoff control platform, robust Industrial PCs or embedded controllers using TwinCAT as the universal automation software integrate PLC, visualisation, motion control, safety technology and measurement technology tasks. Beckhoff I/O systems can be used to connect the whole range of sensors and actuators. This includes devices used for day-light-dependent lighting and facade control to control of heating, ventilation and air conditioning through to show lighting, sound and projection

control. EtherCAT, the real-time-enabled fieldbus system, provides the necessary communication speeds. Through the integration of all communication protocols typically found in the areas of A/V, multimedia, building automation and show technology into the PC control platform, all devices from a wide range of manufacturers can be connected and controlled. Because the system is modular throughout, its functionality can be easily extended, for example, by adding an I/O terminal that supports the required signal.

The various hardware components and their functionalities are programmed and configured in uniform software using TwinCAT.

Your built-in benefits for media technology with PC-based control:

- Continuity – one control platform for all trades
- Openness – interfaces for all popular communication standards in the area of media, building and stage technology
- Scalability – in terms of performance, design and price
- Modularity of components – for flexible control design
- Extensive connectivity – from horizontal communication to cloud integration
- Excellent price-performance ratio

The open communication platform from Beckhoff

The powerful PC-based automation platform handles control, data processing, connectivity, visualisation and remote maintenance. With open software and hardware interfaces, it is ideal either for centralised or decentralised control of all applications in the fields of conferences, control centres, building and entertainment technology, such as audio and video, integrated automation, digital signage as well as operation and monitoring. In addition to integrating building technology standards such as DMX, DALI, LON, EIB/KNX, BACnet, SMI, MP-Bus, M-Bus, EnOcean, RS232/RS485, Modbus and TCP/IP, system integrators also have the most popular interfaces at their disposal for integrating AV and multimedia systems. With sACN, SMPT E Timecode, Art-Net™, AES70 (OCA), PosiStageNet and PJLink, Beckhoff masters all relevant languages in these industries. As a result, the most varied application areas in media, monitoring, building and show technology can be implemented on the basis of standard control components.

Benefits that Beckhoff provides for you.

Maximum scalability

Control solutions from Beckhoff are up to the task at hand: all product lines in the areas of Industrial PCs, I/Os, drive technology and automation software can be scaled optimally to suit the application. The range of Industrial PCs thus extends from the ultra-compact C6015 IPC with dimensions of 82 x 82 x 40 mm to the many-core Industrial Server with up to 36 cores.

Comprehensive connectivity

PC-based control speaks all networking languages: all customary communication standards and fieldbus systems – and all protocols typically used in media and building automation – are supported, permitting the easy integration of all systems and devices.

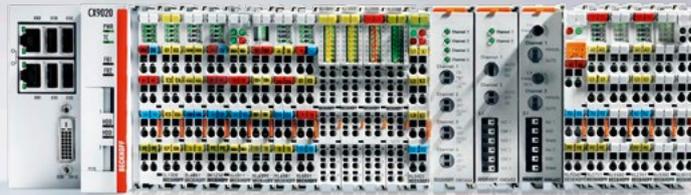

Secure your technological lead with Beckhoff.

Simple panel display integration in the field using CP-Link 4

CP-Link 4, the one cable solution for transmitting video signals, USB 2.0 and power supply using a commercially available Cat.6A cable, allows a Control Panel to be installed remotely from the PC at a distance of up to 100 metres. This significantly reduces cabling and installation costs.

Optimised graphics functionality with DisplayPort

DisplayPort monitors with a resolution of up to 2560 x 1600 @ 60 Hz can be connected using the DisplayPort option for the CX5130, CX5140 and CX20x0 Embedded PCs from Beckhoff.

Long-term availability

When you choose Beckhoff, you choose industry-proven, reliable and long-term available control technology "Made in Germany".

Modular and flexible

The Beckhoff I/O portfolio includes over 400 signal types and 36 fieldbus systems, and is ideal for controlling the full range of sensors and actuators. Together with the modular TwinCAT automation software, users have optimum flexibility when configuring their application-specific controls and for extending functionality over time.

Further benefits of the Beckhoff control solution:

- Use of standard components, programming and networks
- Recording of all data points in one system
- Consistent software for all trades
- Shorter engineering times and lower costs
- Complete system provider with deep industry expertise
- Simple installation of third-party software

Custom user interfaces on any screen: with TwinCAT HMI

Integrated in Visual Studio®, TwinCAT HMI software offers a WYSIWYG editor for HTML 5 as well as straightforward configuration using drag-and-drop for all browsers, operating systems and devices, including mobile.

"Plug and Cloud": using Beckhoff IoT products

Connection to popular cloud systems can be performed either from the controller via the IoT protocol standards AMQP, MQTT and OPC UA, or directly using the IoT Bus Coupler from Beckhoff. This coupler enables simple and standardised integration of I/O data with cloud-based communication and data services via configuration, without the need for any special control program.

Further highlights for media technology:

- C60xx ultra-compact PCs: minimised housing dimensions, flexible installation
- EtherCAT: the real-time fieldbus system
- EtherCAT P: the One Cable Automation solution for field level devices
- Cycle times down to 50 µs
- Support for multi-core CPU functionality
- Sound options for PCs
- Network ports as standard on all controllers

Technical functional drawing

CX Embedded Controller series with DisplayPort option

A universal platform for all audio/video equipment, IP networks and cloud services

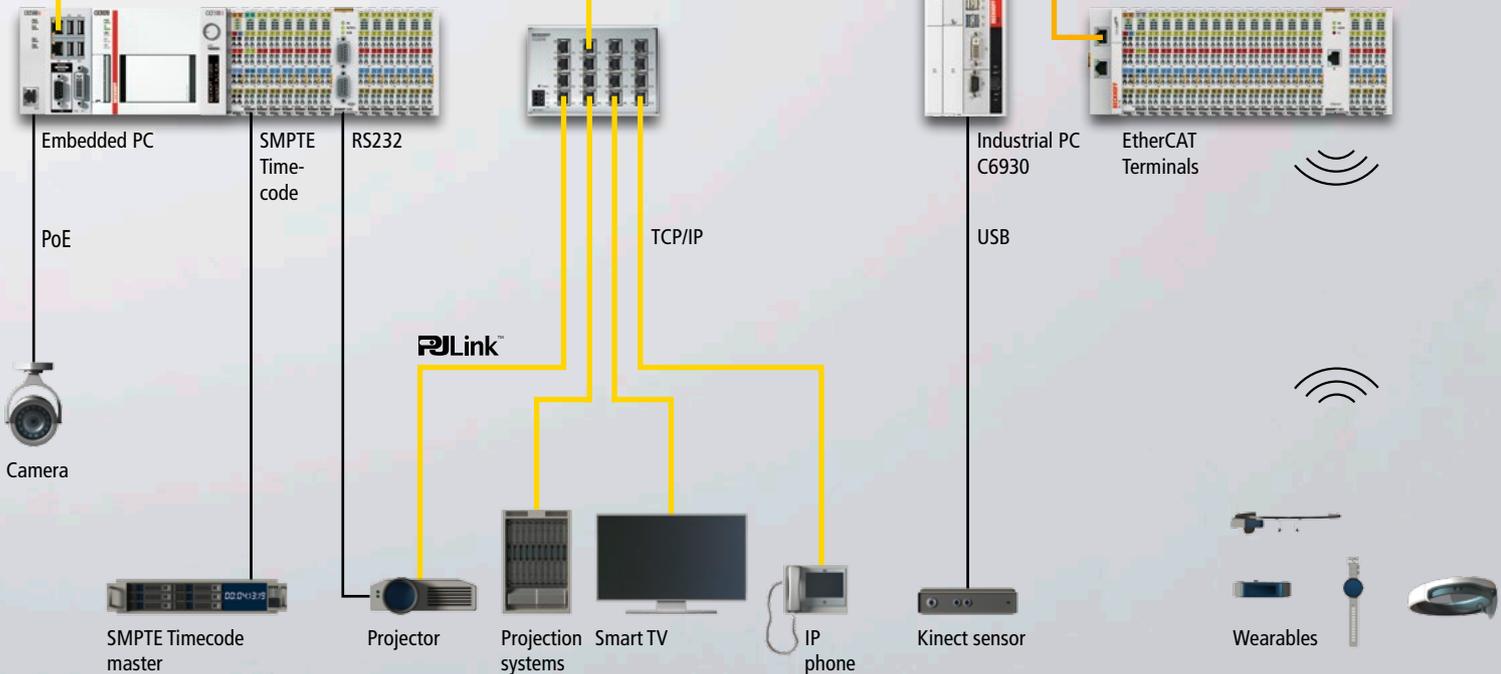

In addition to Ethernet TCP/IP, serial protocols and OPC UA, the Beckhoff control platform supports all relevant protocols in the area of media technology. This includes Open Control Architecture (AES70 standard), PJLink, SMPTE Timecode, Crestron, Bang & Olufsen, Art-Net™ and Streaming ACN (sACN), among others. Vendor-independent control of the widest range of media technology equipment enables the seamless operation of audio and video systems, display devices, multimedia servers

19" slide-in Industrial PC C5240

Video

Multimedia

and streaming services – in one network and on the same platform. The advantage for users is clear: they are not restricted in their choice of media technology equipment and are free from manufacturer-specific protocol considerations. The Beckhoff platform serves as a “multi-language gateway”, ensuring flexible communication among devices, as well as optimum usability.

Through the scalability and modularity of the software and hardware components from Beckhoff, users can tailor their control system precisely to the scope of the control tasks at hand. Users can achieve significant performance improvements and cost reductions, but also

optimise available installation space. The CX2000 Embedded PC, for example, represents an extremely powerful and modular control solution based on multi-core processors from Intel®, helping to combine audio, PoE, DisplayPort and DVI on one universal platform.

Increased comfort and reduced energy consumption: building automation for all systems

By supporting all communication standards for building automation – from operating and monitoring, lighting, HVAC and facade control through to energy data collection – all functions can be integrated into the automation platform from Beckhoff. The universal, coordinated control system increases comfort levels for building users. In addition, the system-integrated nature of the platform delivers energy savings and reductions in investment and operating costs.

EtherCAT P

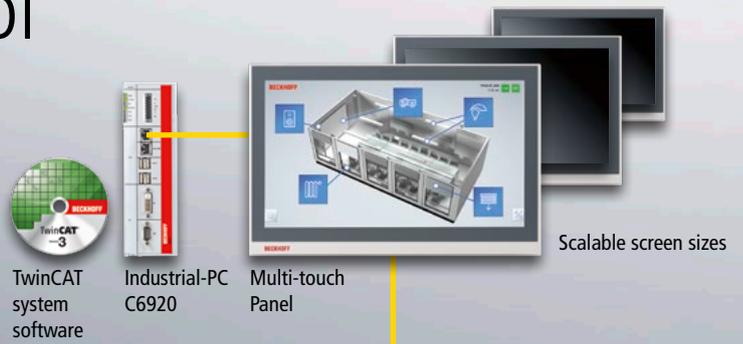

TwinCAT function blocks for building automation enable the automation of shade control, lighting, ventilation, in addition to heating and cooling according to the time of day and presence of occupants. This enables energy-saving room automation and enhanced comfort at the same time. Therefore, lighting correlates directly with facade control. An effective interconnection of the two disciplines is the optimal way to reduce energy consumption of lighting. The end goal is to use as much natural daylight as possible without glare, while still providing constant light intensity.

A building can be regulated on a time-dependent basis via integrated room automation in a variety of different operating modes. This especially reduces heating and cooling energy consumption during longer periods of absence. Nevertheless, the system must reach a comfortable temperature quickly during core occupancy hours and ensure good air quality at the same time.

Field/Control Level

With minimised dimensions the C6015 IPC opens up new fields of application.

Technical functional drawing

Robust, reliable and easily expandable: the PC platform

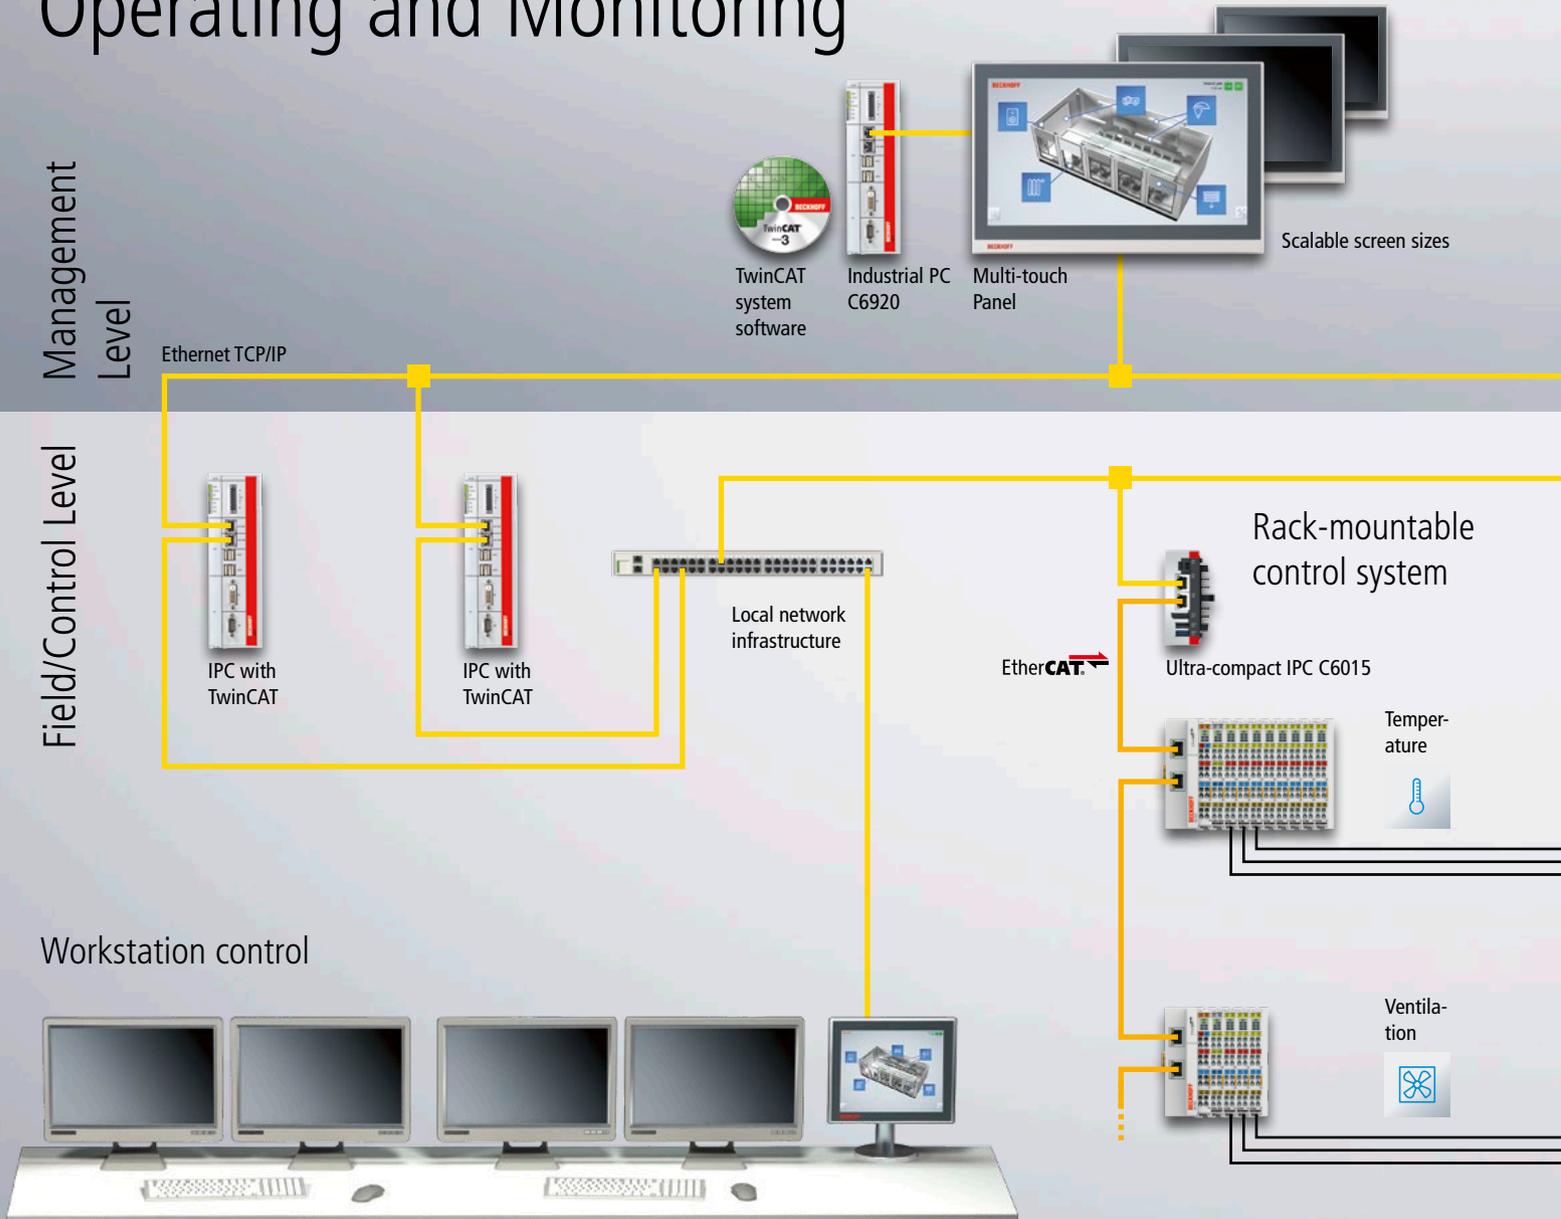

Used for displaying information or for advertising purposes, large digital screens are no longer a rarity at airports, in control centres, public spaces, shopping centres or in office buildings. It is now common for 100 displays or more to be controlled reliably 24/7. The robust, fanless and ultra-compact IPC C6015 is ideal here, for example, due to its minimal footprint, flexible installation and low costs. Beckhoff Industrial PCs come as standard with the interfaces needed to transmit electrical signals, IP, image and sound signals. The possibility to operate different media play-

ers on one universal platform allows users to independently choose their software with a large degree of flexibility.

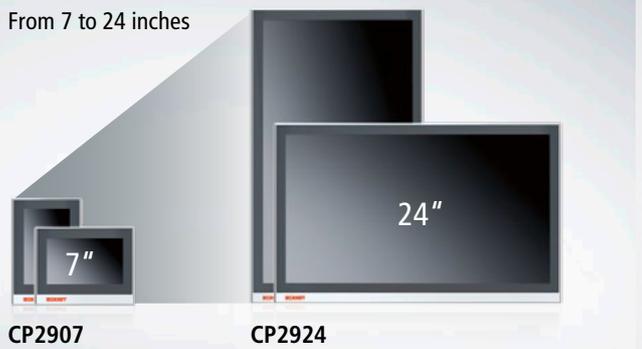

Monitors with a resolution of up to 2560 x 1600 @ 60 Hz can be connected using the DisplayPort option, which is available on the CX5130, CX5140 and CX20x0 Embedded PCs. A second monitor can be controlled in each case by means of the DVI interface. The excellent scalability of the control platform and its flexible expandability is yet another benefit. For example, the system can be extended at any time by incorporating device monitoring solutions – with feedback on the device status, temperature or energy consumption – for the data to be retrieved locally or globally.

Control, operation and monitoring on one multitasking platform

The ability to monitor the status of equipment and access control systems – anytime and anywhere in the world if desired – is becoming more important with each passing day. In this way, operators or service engineers in a control centre can check anytime whether devices installed in the field are operating properly. The support for standard interfaces as well as all vendor-specific protocols of relevance for a specific industry makes the Beckhoff control system an open platform that offers users maximum flexibility to configure their

applications. A single platform can be used to monitor the status of various third-party systems, for example, an array of monitors or various different physical parameters. The Beckhoff control system can be flexibly expanded because of its inherent modularity. If the monitoring functions are to be extended, this can be solved with the addition of a corresponding I/O terminal to the network and a simple software update, for example. Beckhoff also offers a wide variety of elegantly designed multi-touch Control Panels and Panel PCs for operator interface and monitoring. Display sizes ranging from 7 to 24 inches allow users to choose the ideal device for their application.

Operating and Monitoring

Sales development

The Beckhoff "New Automation Technology" philosophy represents innovative control and automation solutions that are used worldwide in a wide variety of different applications and industries, ranging from CNC-controlled machine tools and wind turbines to intelligent building automation.

Worldwide presence on all continents

The worldwide presence of Beckhoff in more than 75 countries ensures fast service and support for globally operating customers in their local language. Moreover, geographical proximity helps us develop an in-depth understanding of the technical challenges our customers are faced with around the world.
